

Sprint 4 Report: Price Your Playlist

- **Actions to stop doing:** Since this is our final build sprint, there isn't much we want to stop doing. We were happy with how we divided and coordinated tasks throughout the sprint, and our workflow held up well even with the heavier integration work this time around. If anything, we want to avoid leaving the more complex tasks, like making the API calls run in parallel, until late in the sprint, since those carried the most uncertainty and were the hardest to debug.
- **Actions to start doing:** Now that the buying experience is feature complete, we want to shift our focus toward polishing the app, cleaning up our documentation, and preparing for our final presentation and demo. We would also like to start doing more thorough end to end testing across full playlists rather than testing each feature in isolation, so we can catch edge cases that only show up when everything runs together.
- **Actions to keep doing:** We want to keep up the consistent communication and our regularly scheduled weekly meetings, which kept everyone on the same page. Merging more frequently with the main branch worked well this sprint and saved us from the complicated merges we were worried about, so we plan to keep that going. Working on separate tasks in parallel also let us move quickly without stepping on each other, and we would like to maintain that.
- **Work completed/not completed:**

Every user story we planned for this sprint was completed, along with all of their associated tasks. Since our Acceptance Criteria includes the rule that all tasks associated must be completed in order to mark a user story complete, all five user stories met that criteria this sprint.

- Work completed
 - As a user, I want to have an option of buying an album or a set of songs (3/3 tasks complete)
 - As a user, I want direct links to storefronts for >80% of songs (3/3 tasks complete)
 - As a user, I want to quickly see results so that I don't wait on long loading screens (2/2 tasks complete)
 - As a user, I want to retrieve a link for a single song (2/2 tasks complete)
 - As a user, I want to be able to choose the format for the physical media (3/3 tasks complete)
- Work not completed:
 - None. All planned user stories and their associated tasks were completed this

sprint, including the physical format option that was carried over from Sprint 3.

- **Work completion rate:** Since this was our last build sprint, we completed all 5 user stories that we planned for it, which puts our work completion rate at 100%. After revisiting our story points estimation following Sprint 3, our hour estimates lined up much more closely with the time we actually spent, so we were able to plan realistically and finish everything we set out to do. With the buying experience now complete, the work that remains is polishing, testing, and preparing for our final presentation.
